

LUO HERITAGE / SELF-STUDY SLIDES

LANGUAGE • CULTURE • LIVING MEMORY

Master Super Admin

Own platform access and protect the institutional system

You will be able to oversee high-impact actions, delegate responsibly and keep the platform’s records safe.

READ • TRY • CHECK

25 October 2026 | Edition 1.0

Start here: learn at your own pace

1. Read a slide, try its action, then check the result. Tap means click. Gold circles mark important controls in the screenshots.
2. Use your own account. Your organisation supplies the correct website address and any staff access.
3. Screenshots show the current interface with practice details. Actual names, content and menus may differ.

Read the step → **Try it yourself** → **Check the result**

If your menu looks different, first check My access. Do not ask someone to lend you their account.

CHECK: You will be able to oversee high-impact actions, delegate responsibly and keep the platform's records safe.

What this guide covers

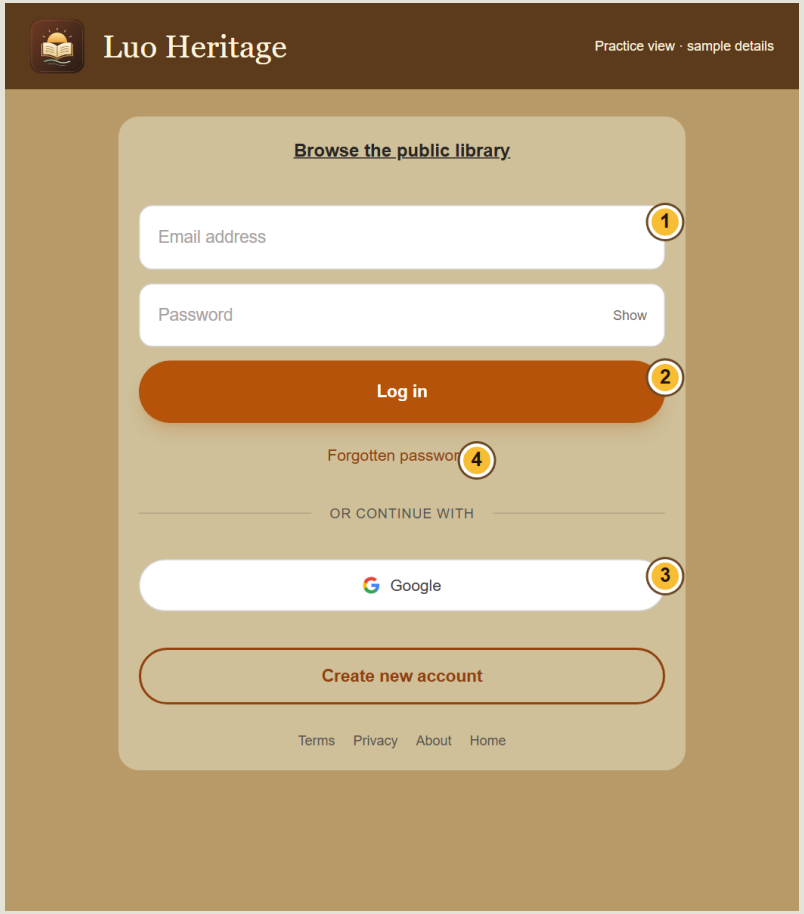

1. Manage Super Admin authority, languages and institutional settings.
2. Check account recovery, backups, public terms and service health.
3. Use documented checks before high-impact changes and handover.

CHECK: Use the slide numbers to return to a task. The PDF has page bookmarks; PowerPoint has a contents view.

Sign in to your own account

1. Open the Luo Heritage address supplied by your organisation. Choose Sign in or Log in.
2. Enter your email and password, then choose Log in. Check your spelling if it fails.
3. Community members may also use Google. Staff should use the account supplied by their administrator.

Never share your password. Use only an address you trust.

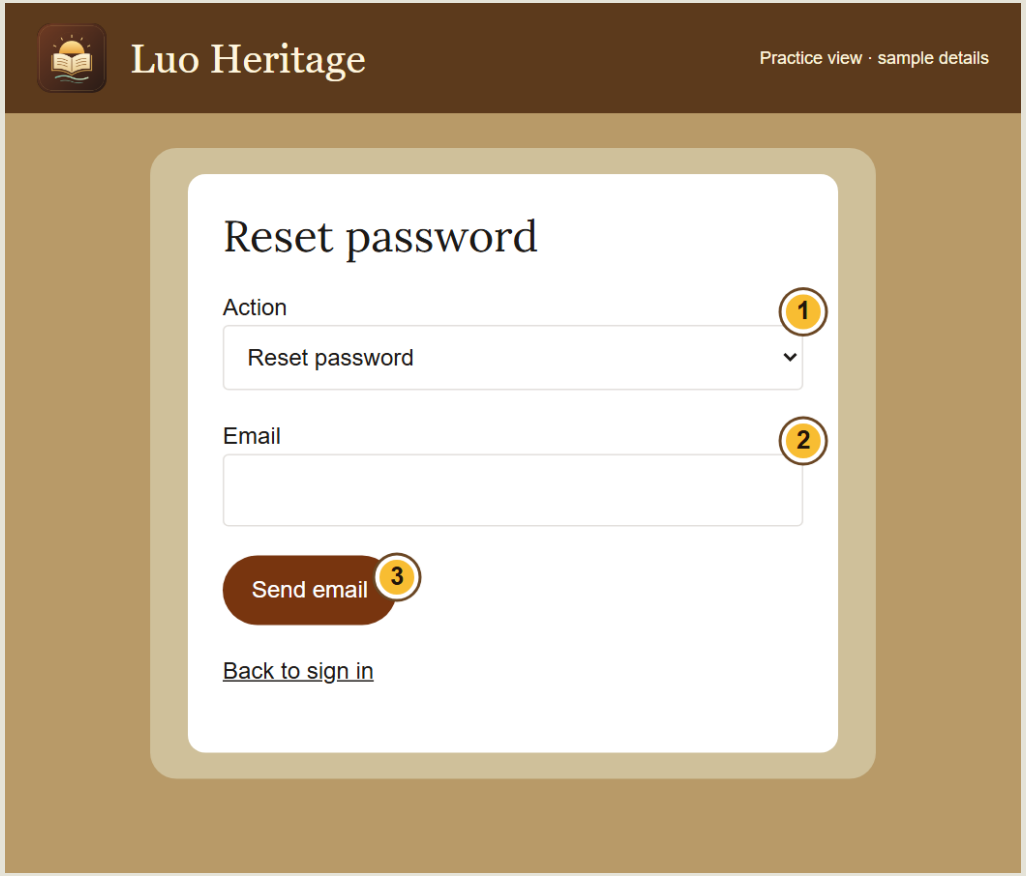

CHECK: Your account or dashboard opens.

Forgot your password?

1. On the sign-in screen, choose Forgotten password? Select Reset password.
2. Enter your account email. Choose Send email, then check your inbox and spam folder.
3. Open the newest reset link within 30 minutes. A link can be used only once.

If no email arrives, contact the person who manages your account. Do not keep requesting links.

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: An account email arrives if the address is eligible and the email service is available.

Choose a new password

1. Open the password reset link from your own inbox.
2. Enter a new password of at least 12 characters. A short phrase with several words is easier to remember.
3. Choose Confirm. Return to sign in and use the new password on each device.

Do not forward the reset link. If it has expired, request a new one.

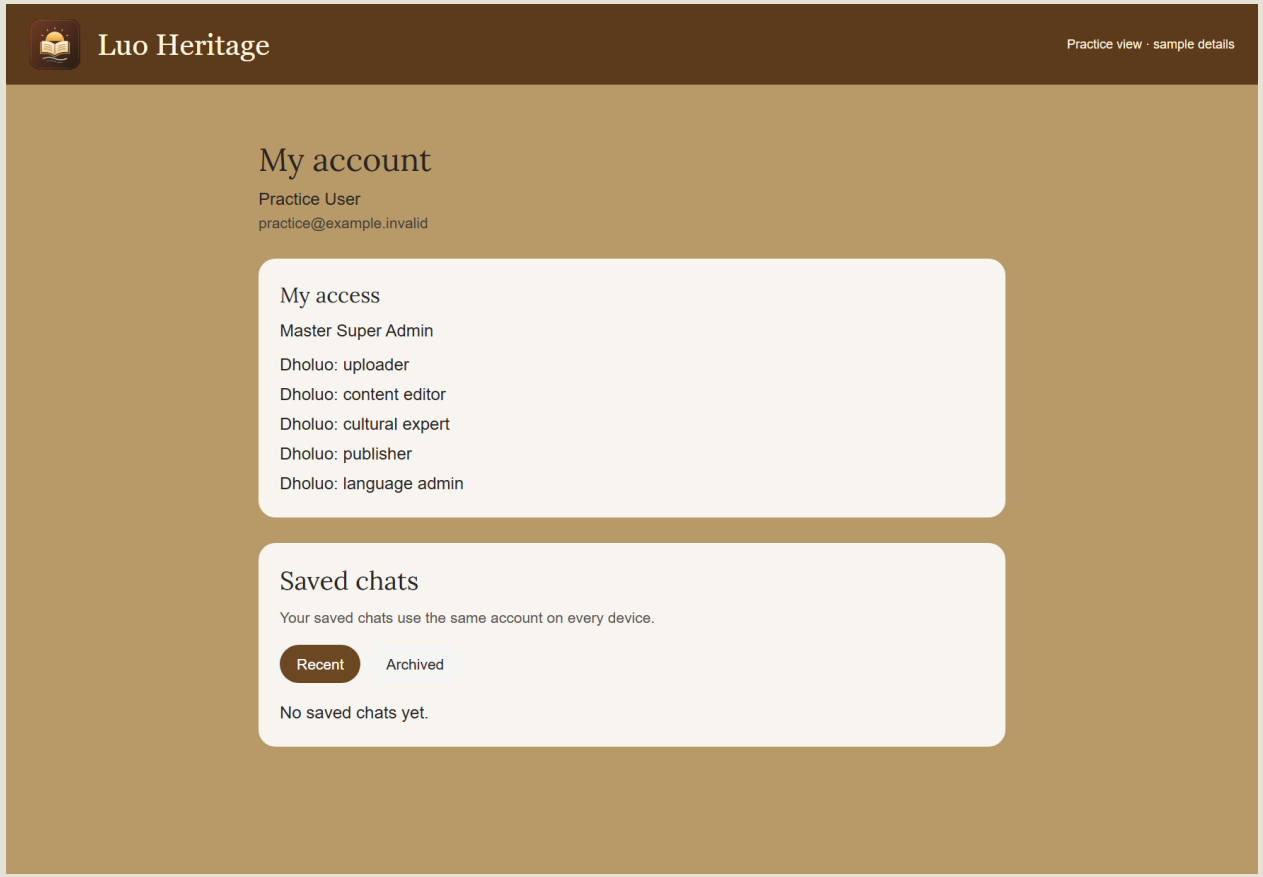

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: The password changes and old sign-ins are ended.

Your role carries overall responsibility

1. Use your own protected account. Confirm My access shows Master Super Admin.
2. Keep the organisation’s ownership, support arrangements and recovery contact current.
3. Delegate ordinary work to named staff; broad access is not a reason to bypass independent review.

Check My access on your own account; the screenshot uses a labelled practice account.

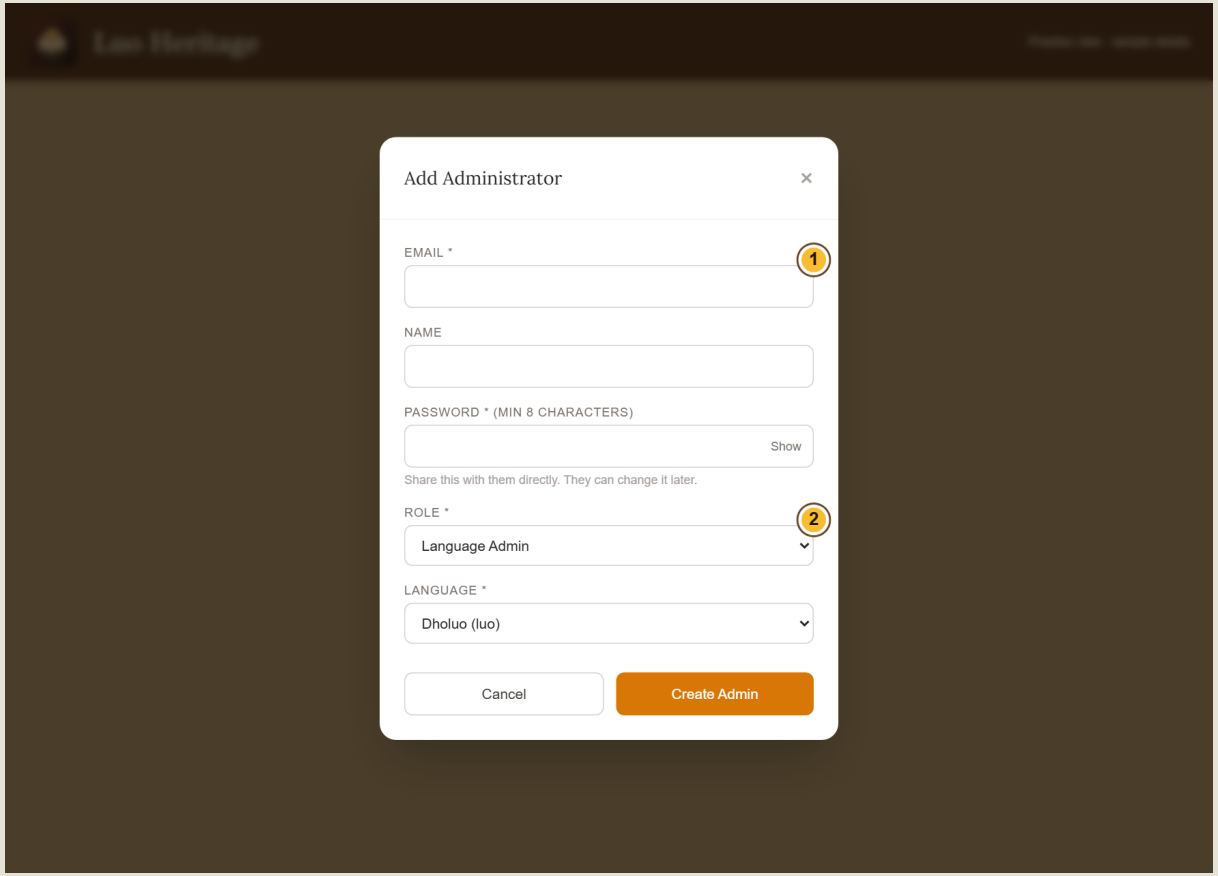

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: You know which responsibilities must remain with the institutional owner.

Create or change Super Admin authority

1. Open Admins, then + Add Admin to prepare a new staff account.
2. Select Super Admin only for a trusted person with an agreed responsibility. Assign the languages they oversee.
3. Check the saved account carefully. Read the consequences before revoking or deactivating a Super Admin.

Never create a shared administrator account for a team.

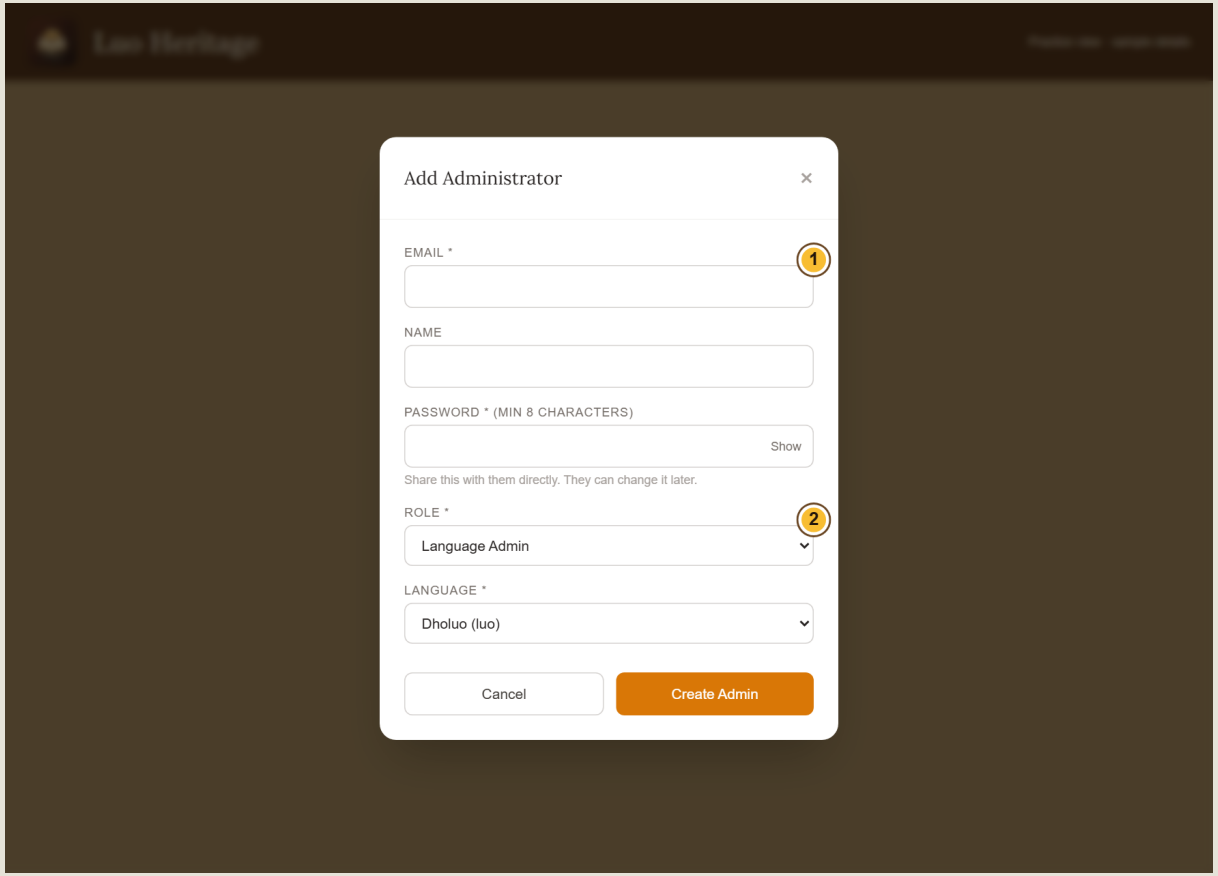

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: Only the intended person receives the intended authority.

Create a staff account for the right person

1. Open Admins, then choose + Add Admin. Confirm the person's email and name.
2. Choose only the role and language the person needs. Set a strong temporary password.
3. Save the account. Share access details privately with that person and ask them to set their own password.

Only the Master Super Admin can create or remove Super Admin authority.

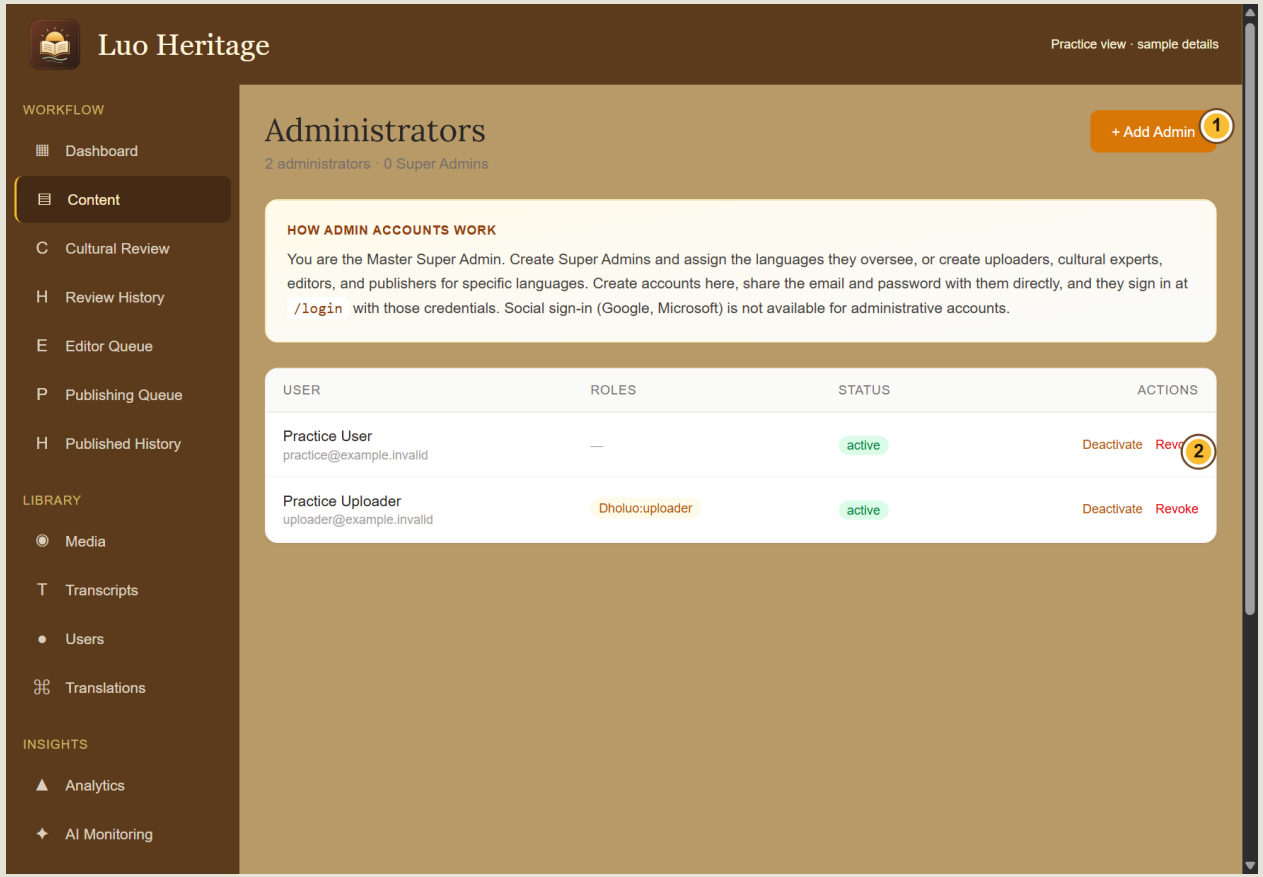

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: The staff member appears in Administrators with the intended role and language.

Maintain your staff list

1. Open Administrators and review each name, email, language and role.
2. Remove unneeded authority through the permitted controls after confirming ownership of ongoing work.
3. Keep cultural reviewers, editors and publishers distinct wherever possible. Record the reason for important access changes.

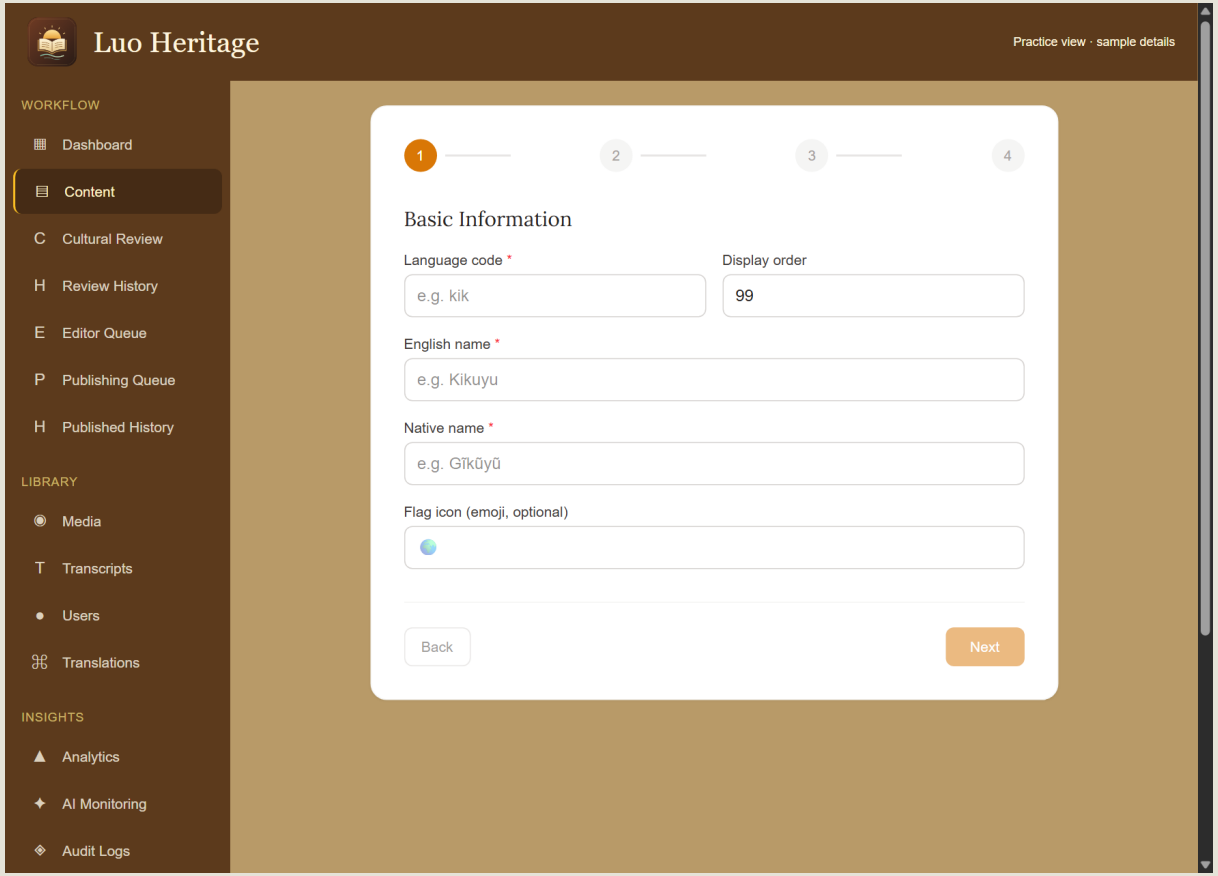

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: Current staff responsibilities are clear and former staff cannot retain unwanted access.

Add a language deliberately

1. Open Languages and choose + Add Language.
2. Follow the numbered language setup: enter the code, name and local name, then check the module and administrator choices.
3. Review the summary before saving. Creating a language does not create reviewed translations or public cultural content.

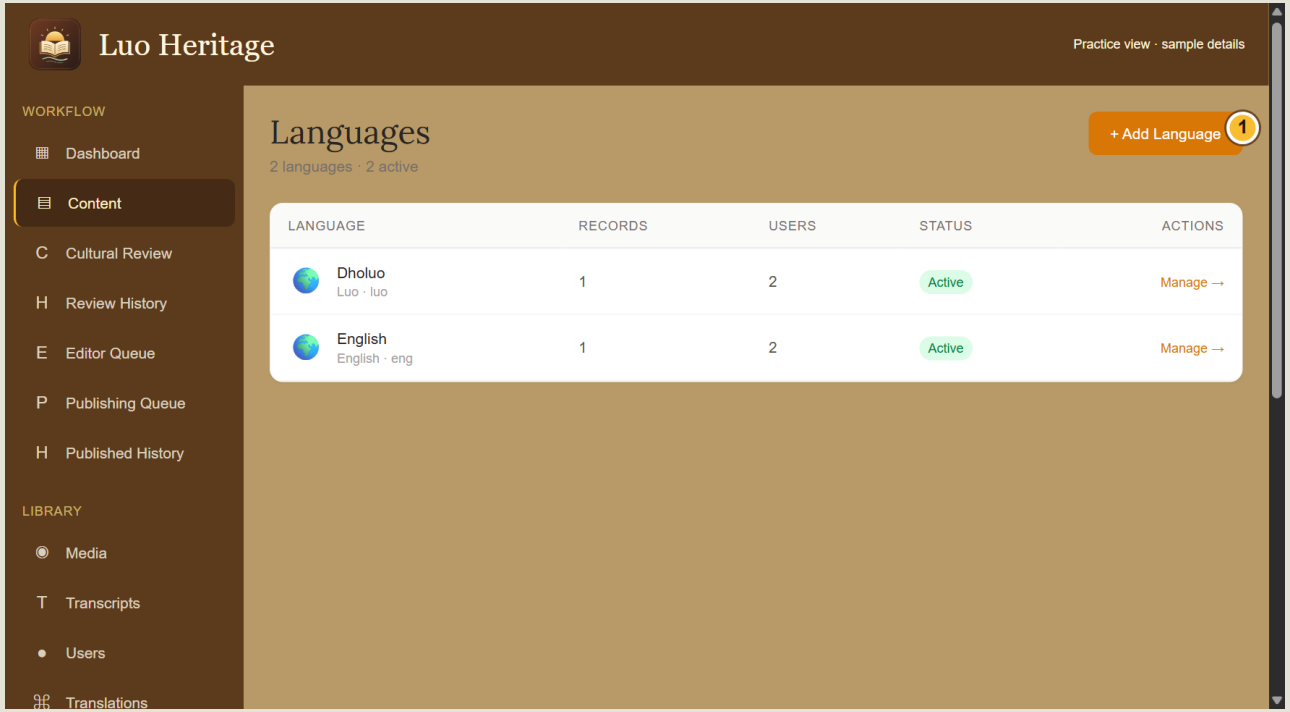

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: The intended language exists with its configuration ready for checked content.

Review a language before activation

1. Open Languages and select the language.
2. Check its labels, assigned staff and collections. Confirm that any public content is reviewed and permitted.
3. Use the available activation controls only when the organisation agrees it is ready.

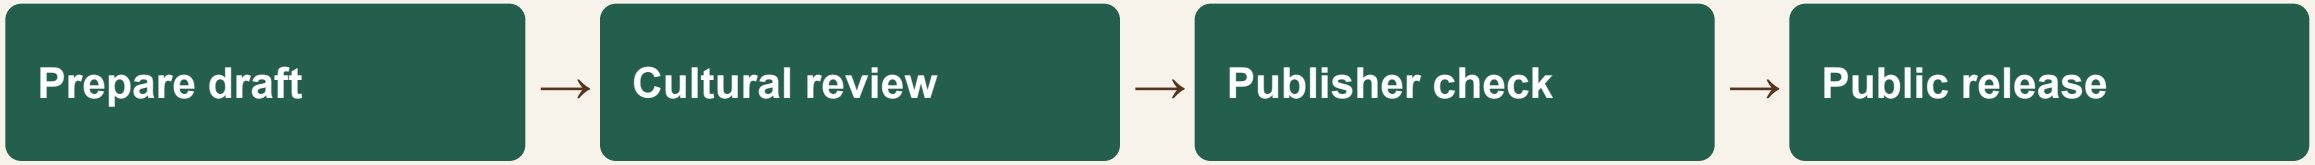

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: The public language selection reflects your deliberate decision.

How a contribution reaches readers

1. The uploader or contributor prepares a draft and submits it.
2. A cultural reviewer checks accuracy. An editor makes requested corrections and returns the item for review.
3. A publisher checks the final item and permission. Only an approved public release becomes visible to readers.

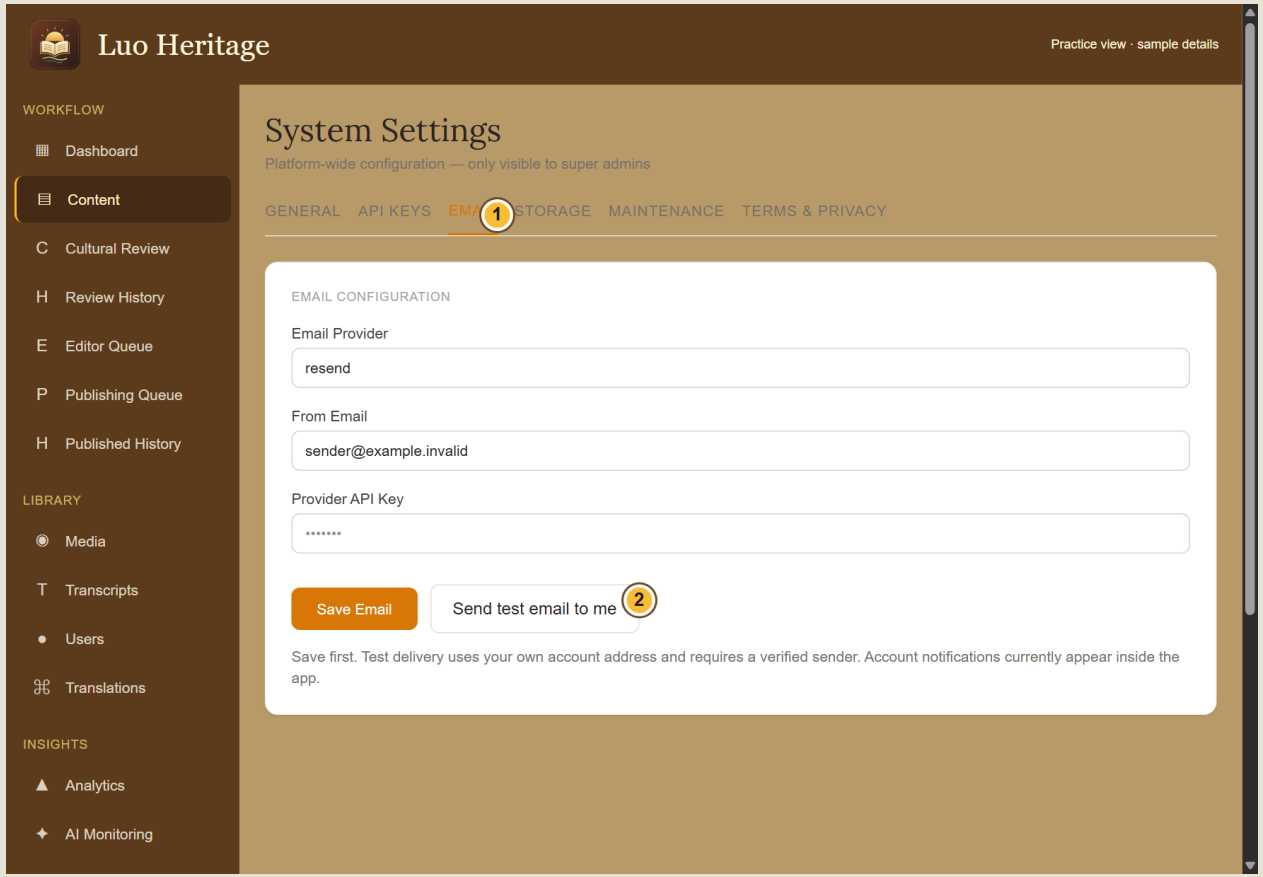

Different people should perform the independent checks. Do not approve your own work.

CHECK: An item may return for changes. Drafts and private approvals are not public publication.

Check account email settings

1. Open System, then Email. Confirm the approved provider, verified sender address and private service key.
2. Save the email settings. Choose Send test email to send to your own signed-in account.
3. Check both the screen result and your inbox. A provider accepting a message is not proof it reached the inbox.

Keep keys secret. Password reset cannot send email while provider credentials or sender approval are missing.

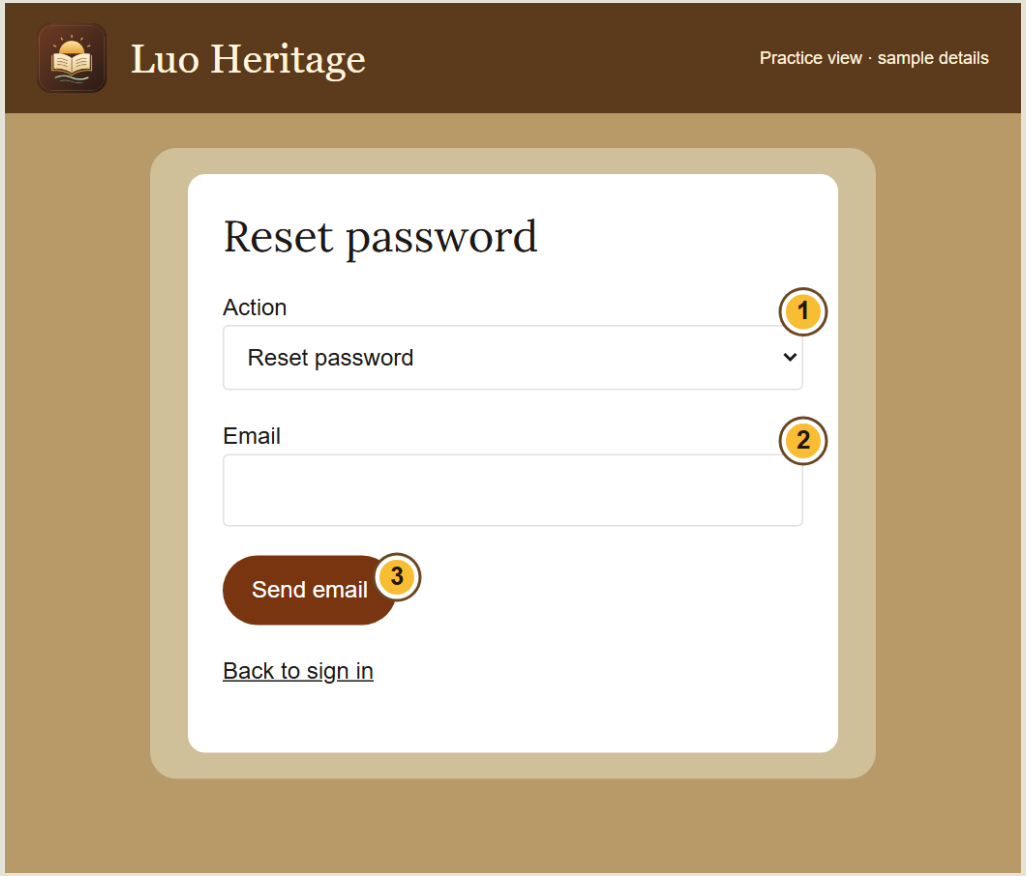

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: You have evidence that the account email path is configured and can be tested.

Help with a failed password reset

1. Confirm Email settings and the test result before asking the user to retry.
2. Ask the user to request a fresh link, check spam and use the newest link within 30 minutes.
3. Keep the user’s reset link and new password private. Record the problem without including either.

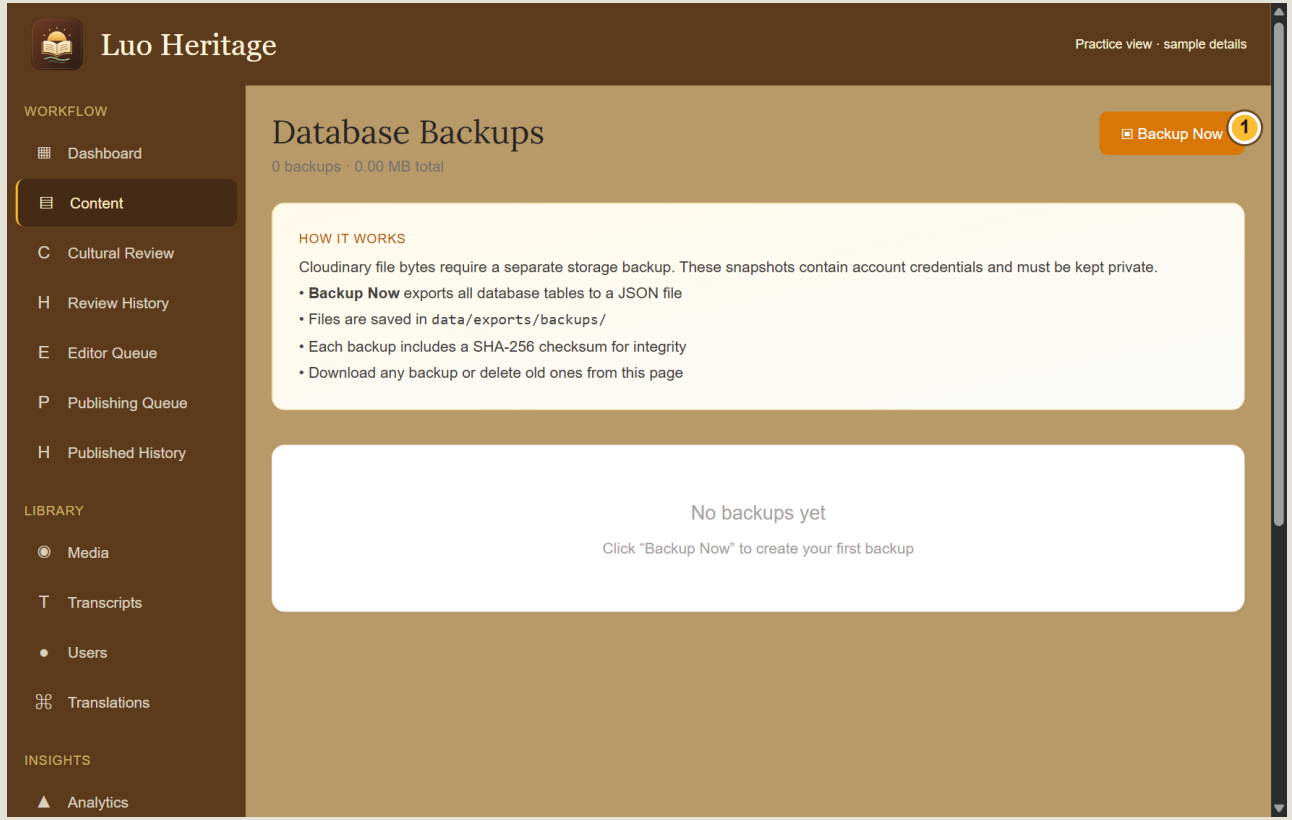

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: The user can follow a safe recovery path once email delivery is available.

Make and protect a database backup

1. Open Backup and choose Backup Now when a backup is authorised.
2. Wait for confirmation, then check the new file in the list. Store any downloaded copy in the organisation’s protected location.
3. Ask the technical maintainer to verify recovery. A database backup does not contain the actual picture, audio or video files.

Backup files contain sensitive account data. Never attach them to a public message or training exercise.

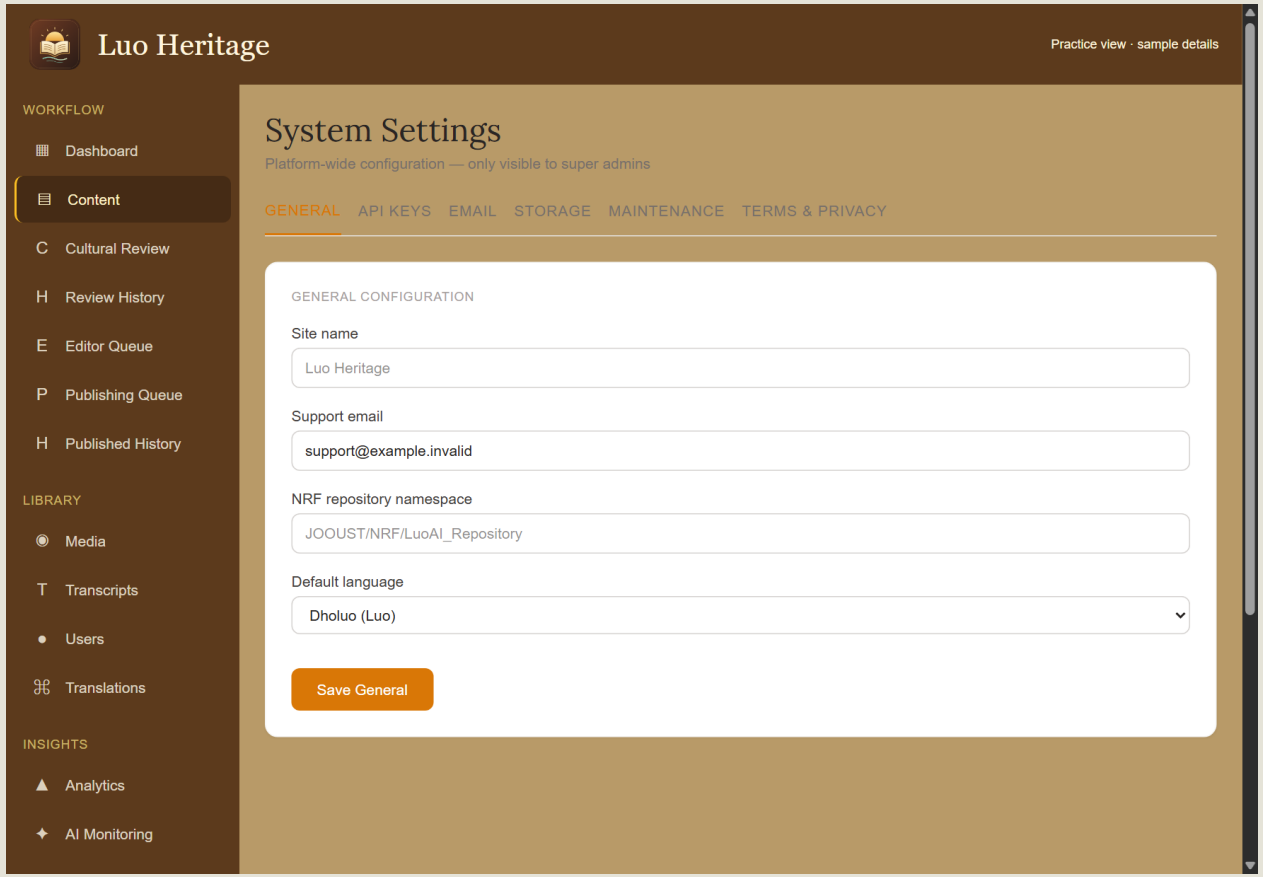

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: A protected database snapshot is recorded; separate media backup and recovery checks are arranged.

Check public terms and support information

1. Open System and review the General settings and Terms & Privacy tab.
2. Replace draft organisation details with the verified operator and support information before publishing those texts.
3. Have the responsible institution approve the wording. Check the public pages after saving.

Do not publish a legal draft containing bracketed placeholders or unapproved promises.

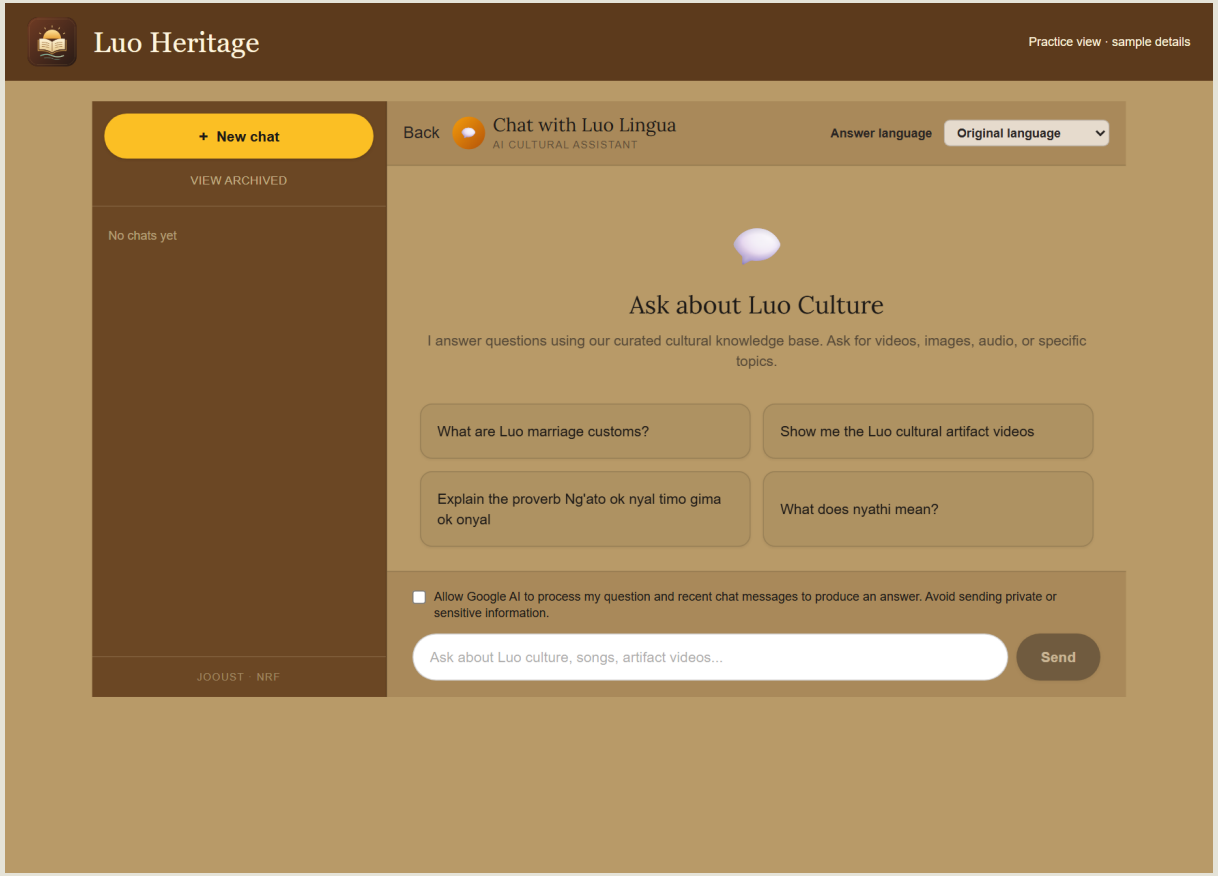

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: Readers can find the correct organisation and support information.

Treat AI settings and feedback responsibly

1. Use API Keys and AI Monitoring only for the services and records you are permitted to manage.
2. Keep service credentials private. Test ordinary questions without submitting restricted interviews or personal information.
3. Investigate wrong answers using their sources and feedback. Do not describe untested language or image models as reliable.

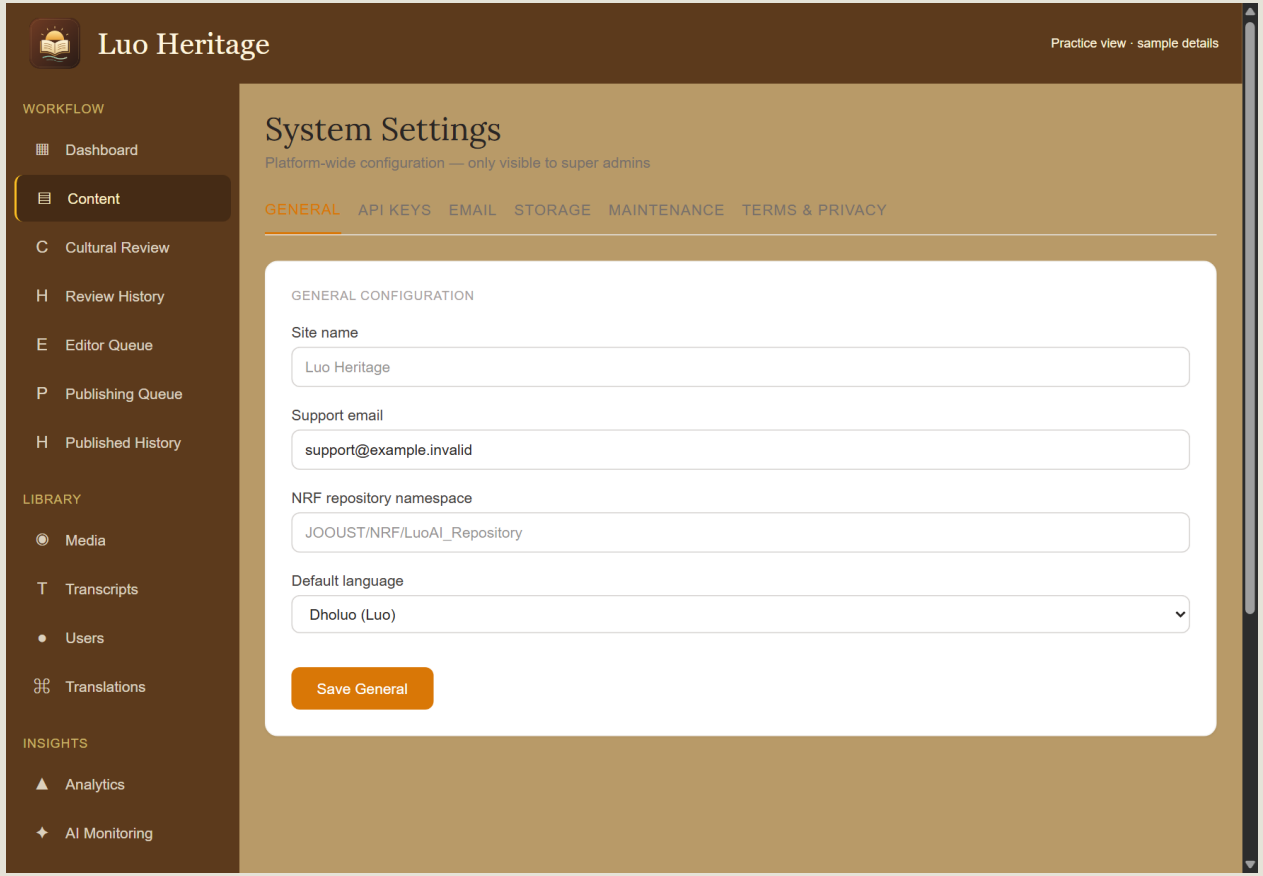

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: AI support is used with clear source and privacy checks.

Use maintenance and ownership controls carefully

1. Before enabling maintenance, tell the affected staff and agree when access will return.
2. Read each control and confirmation. Confirm the public view afterwards.
3. Do not delete the Master Super Admin account to transfer responsibility. Arrange the approved institutional ownership process first.

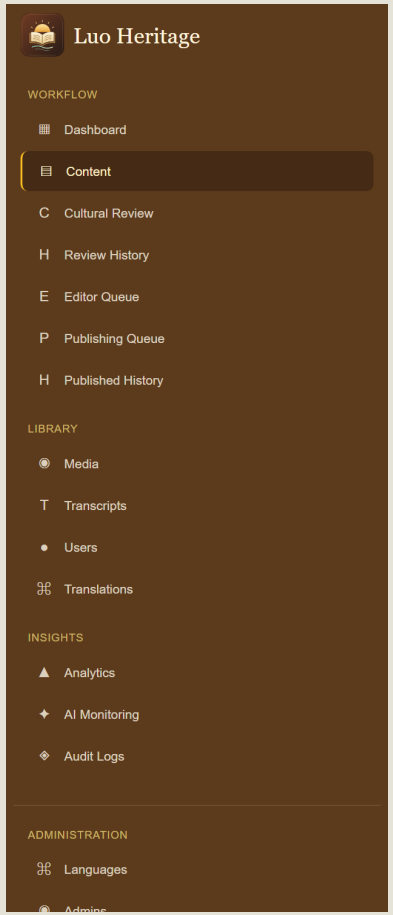

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: High-impact changes have an owner, a reason and a checked result.

Prepare an orderly handover

1. Give each person their own account, role guide and approved website address.
2. Keep private service details, backup locations and recovery contacts in a restricted handover record.
3. Record which service and device checks have actually passed. Treat physical-server migration and store release as separate planned work.

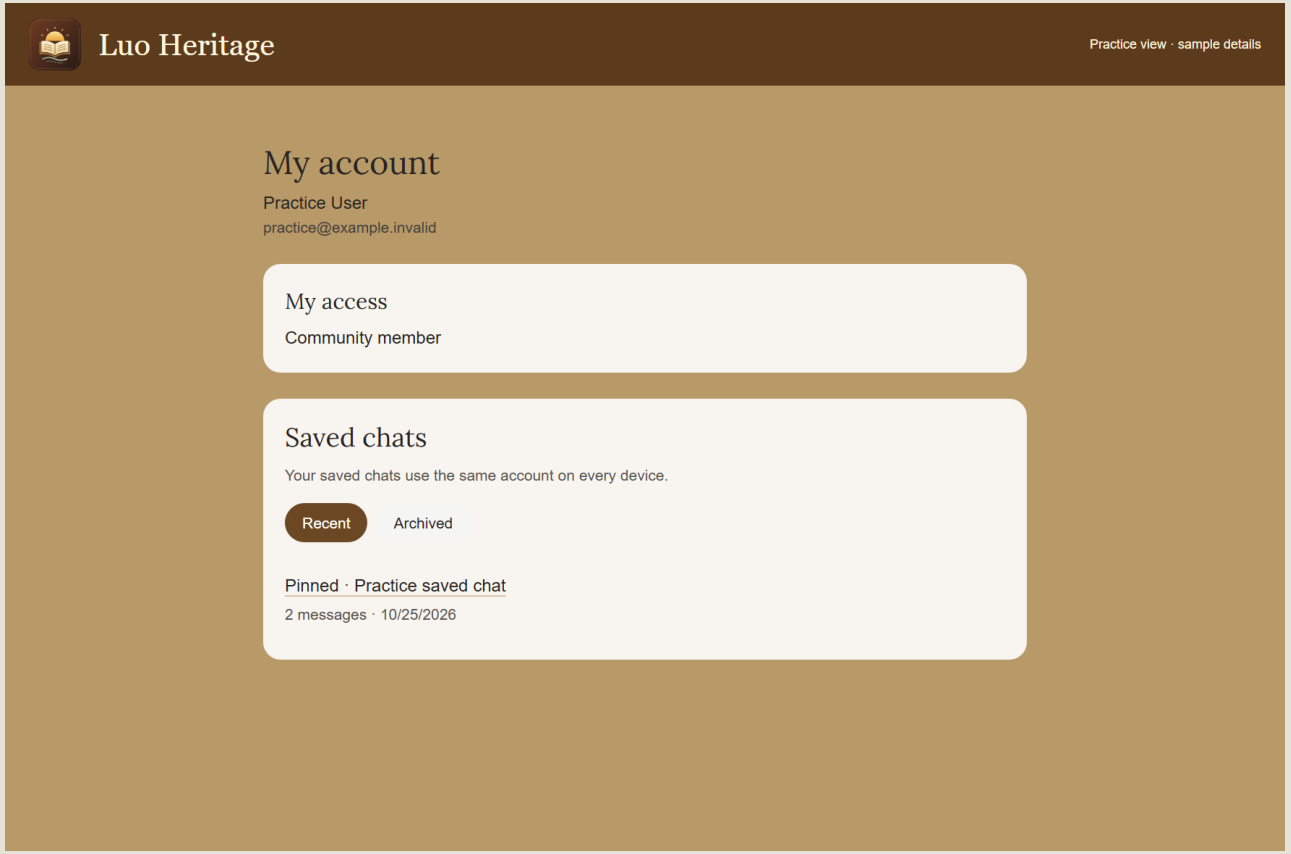

CHECK: The next responsible person can operate the system without sharing passwords or guessing what was tested.

Protect your account and other people

1. Use your own account. Sign out on a shared computer or phone.
2. Do not copy private interviews, class results or account lists into public chats or messages.
3. If a screen shows information you should not see, stop and tell the account administrator.

Send support the screen name and error message, never your password or a reset link.

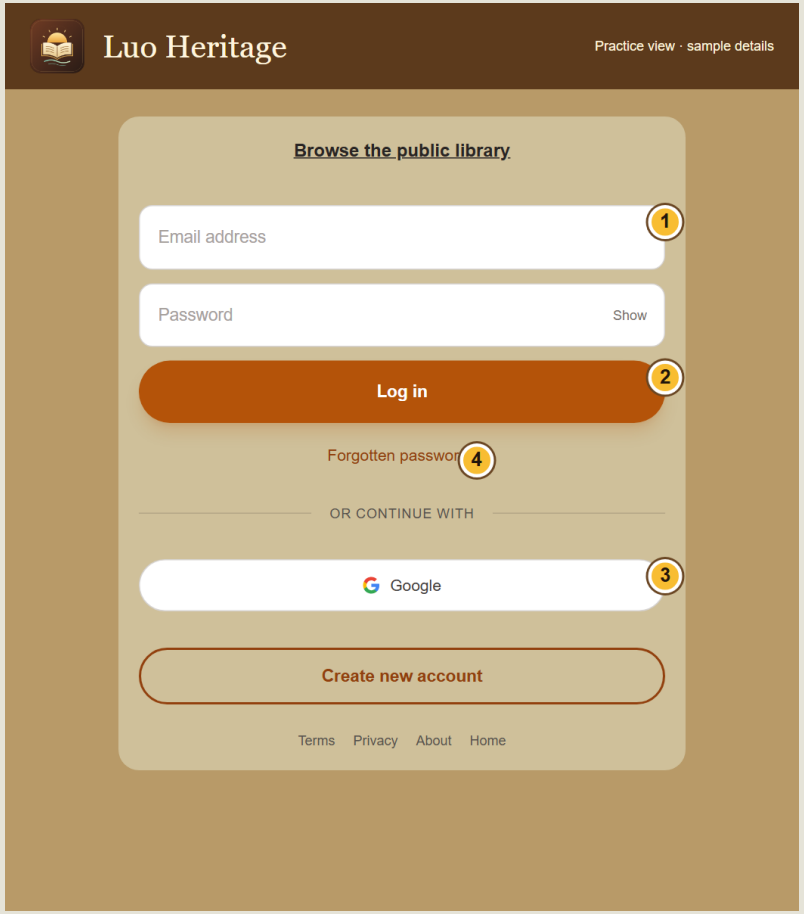

CURRENT INTERFACE • PRACTICE DETAILS

CHECK: Your work remains linked to the right person and private information stays protected.

When something does not work

1. Check your internet connection. Read the message on screen before trying again.
2. If your sign-in has expired, sign in again. If a button is missing, ask which role and language you have.
3. If it still fails, note the time, screen, button and exact message. Send these to your account administrator.

Before repeating an upload or submission, check whether the first attempt was already saved.

CHECK: You can explain the problem clearly without exposing private information.

Try it yourself: your readiness check

1. Identify which duties you may delegate and which require Master Super Admin authority.
2. Explain how to check account email delivery without sharing a key or reset link.
3. Explain what the database backup includes, what it excludes, and how you would request a recovery check.

Try → **Check** → **Ask if unsure**

Use only approved practice material. Do not publish, delete accounts or change live settings just to practise.

CHECK: You are ready for routine work when you can complete these steps without help.
